DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 2/12/04, 6/1/04 and 9/14/04; wherein the IDS submitted on 6/1/04 and 9/14/04 are the same (cited the copending US application 10/737,776) were filed after the mailing date of the present application. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Specification

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

EXAMINER'S AMENDMENT

The application has been amended as follows:

In the amended Abstract filed on 9/3/04, change "**comprises**" to "**including**"

Allowable Subject Matter

4. Claims 1-8 are allowed.

5. The following is an examiner's statement of reasons for allowance:

The prior art of record fail to disclose a memory module, in combination with other cited limitations, comprising an access control circuit being arranged separately from the memory components on the carrier substrate, the access control circuit being connected, on the input side, to the terminals for supplying the address and command signals connected on the output side, to the plurality of integrated memory components; the access control circuit being designed such that, when supplying an address signal, the address signal having been generated outside the memory module, the access control circuit receiving an address for a memory access to a memory component which has been selected for the access, the access control circuit generating, from the address received, at least one column address and one row address for accessing a bit line and a word line of the selected memory component, the access control circuit transmitting the addresses to the selected memory component as recited in claim 1.

Claims 2-8 are therefore allowed because of their dependency on claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Konishi et al. (US 5,867,446) disclose a synchronous semiconductor memory device divided into banks which can be operated independent from each other.

b. Johnson et al. (US 6,842,398) disclose a multi-mode synchronouse memory device operable in a normal mode and an alternative mode.
